System Name	Software Version	Device Type

System Description: *(Avoid sales pitch. Describe the actual function and data flow. Are there non-privileged users of the system? What benefits does it bring to the Warfighter?)*

Management Description: *(Include how the system is accessed. Which authentication method(s) are used? Does it support central authentication mechanisms? Is management access used to configure/manage the SUT? What platform version(s)? Are there additional software/applications installed on the management device? Can it report to centralized syslog services?)*

Component Name(s) & Model #(s) (See note.)	Hardware Chipset (if applicable)	Software / Application with Version #	Underlying OS Version (if applicable)	Description/Function

NOTE(S): List the component(s) intended to be provided for testing in **BOLD** font.

New Components to be Certified by Similarity (If Applicable)

Component Model#(s) requested to be added by Similarity (See note 1.)	Software/ Firmware	Tested Component(s) for Similarity Comparison	
		Component Name/Model (See note 2.)	**- For DTRs -** **Is this "New Hardware" or "Previously Tested"?** (See note 3.)

NOTE(S):
1. List component (in non-bold font) requested to be certified by similarity to a tested component(s) in the family series. The assigned test lab will conduct an analysis of the new component to determine whether it is eligible for certification based on similarity to the tested component. Analysis is based on whether the component requested to be added via similarity is in a comparable series, operates on the same software, and has similar hardware as compared to the tested component.
2. List the component in the family series intended to be provided for testing in **BOLD** font.
3. For DTRs, indicate whether the component listed for similarity comparison is new hardware submitted with this DTR or was previously tested and certified under this TN.
